

# Juanjo Capital

GBM 3

Monday, September 9

# Agenda

- Momentum trading with Abhi
  - [Trend or Momentum based Trading Strategy](#)
  - [Why Hedge Funds HATE Momentum Trading](#)
- [Annie's Git Guide](#)
- Logo that doesn't come from Juan's LinkedIn?

## What is Git?

- version control system
  - manage changes to code
  - “Google doc for code”
- collaboration among programmers

*“Git is the actual version control system that **lives on your computer**, while Github is an online service that stores projects... If you want to contribute code to the JC project, you will need to create an account and install Git - instructions for getting Git based on your machine are here.”*

# Getting Started

 Watch ▾ 35

 Star 45

 Fork 37

1. [Create a Github account](#)
2. [Install Git](#)
3. [Get comfortable with Git by making your own repo & adding to it](#)
4. Fork the jjcap repository (aka **repo** - a fancy name for where our project lives online) when you are ready to start working by going [here](#) and clicking the 'fork' button in the upper right hand corner

## What is a Fork?

- copying a repo
  - your own personal version of the codebase
- where you'll add your code instead of the parent repo (jjcap)

# Cloning

- after you've forked a repo, you'll need to access it locally on your machine
- clone the repo
  - click green "Clone or Download" button
  - copy to clipboard
  - `git clone copied url`

# Branching

- to protect your cloned repo, you'll want to use branches
- `git checkout -b branchname`
